Message from Our Leadership

Dear colleagues, collaborators, and friends,

As we reflect on 2025, we are reminded of how much can be achieved through collaborative policy research and evidence mobilization.

This past year was marked by both urgency and opportunity for the antimicrobial resistance (AMR) community. AMR remains one of the greatest and growing threats to health and development, with an estimated 1 in 6 infections worldwide having developed resistance.

Countries face emerging challenges – from geopolitical crises to governance gaps, and drastic cuts in health financing. Following the 2024 United Nations General Assembly (UNGA) High-Level Meeting on AMR and the adoption of the Political Declaration, 2025 became a critical year – not just for reiterating commitments but for maintaining momentum to accelerate implementation of strategies to fulfill these commitments in this rapidly changing global health landscape.

For the AMR Policy Accelerator, this meant sharpening our focus on pragmatic, equity-driven, evidence-informed solutions that add value to existing efforts. In 2025, we contributed to informing the design of the Independent Panel on Evidence for Action against AMR, advancing a cornerstone of AMR global governance. Through the delivery of the Smart Choice Process, we provided a systematic framework for countries to prioritize AMR interventions and identify context-specific implementation considerations to advance the development and operationalization of their National Action Plans (NAPs) on AMR. Concurrently, capacity strengthening initiatives, including the AMR Policymaking Course, equipped AMR experts with enhanced skills to influence AMR policy pathways and champion the integration of evidence into policy and practice. We also brought new perspectives to inform the 2025 update to the Global Action Plan on AMR (GAP-AMR) – integrating social sciences, gender considerations, and principles of One Health governance to reframe how AMR is understood and addressed.

This year, an independent evaluation commissioned by the AMR Policy Accelerator affirmed the value of these efforts. It found that our distinctive approach to linking research, advisory services, and capacity strengthening has amplified the relevance and impact of our work. The evaluation also underscored the importance of our partnerships with governments, global organizations, and academic institutions, which continue to expand our credibility and reach.

The 2025 Impact Report highlights the AMR Policy Accelerator's most significant achievements, but we could not do it alone. Thank you for being a part of our collective effort to tackle AMR and create a healthier, safer, and more equitable future for all.

With gratitude,

Dr. Mathieu J.P. Poirier

Scientific Director, AMR Policy Accelerator
Director, Global Strategy Lab

Dr. Geneviève Boily-Larouche

Managing Director, AMR Policy Accelerator

Our vision:

A future with sustainable access to and use of antimicrobials for all

Our mission:

We bridge science and policy to advance evidence-informed AMR policymaking

The AMR Policy Accelerator, or the Accelerator, is a policy think tank hosted at the Global Strategy Lab (GSL). GSL undertakes innovative research to advise governments and public health organizations on how to design laws, policies, and institutions that make the world a healthier place for everyone. GSL also serves as the World Health Organization Collaborating Centre (WHOCC) on the Global Governance of Antimicrobial Resistance.

[Table of Contents](#)[Message from Our Leadership](#)[Vision & Mission](#)[Our Model for Impact](#)[2025 Impact in Numbers](#)[Reaching a Global Audience](#)[Advancing AMR Global Governance](#)[Actioning Evidence-Informed National Policymaking](#)[Strengthening AMR Policymaking Capacity](#)[Art x AMR: Reimagining Resistance Through Storytelling](#)[Looking Forward](#)

Our Model for Impact

The Accelerator champions evidence-informed AMR policymaking by working closely with international agencies, national governments, and civil society organizations to understand and respond to their AMR policy needs. Our comprehensive model features rigorous policy research, customized advisory services, capacity strengthening, and an integrated approach to knowledge mobilization. Leveraging this model, the Accelerator delivers context-specific support for the development or renewal of AMR NAPs and One Health policies, along with best practice guidance and technical support.

2025 Impact in Numbers

Policy Research:

**9**

academic articles informing global AMR governance and equitable policy design.

**20**

presentations delivering novel research findings at international and national conferences.

**4**

policy briefs to inform the renewal of the GAP-AMR and advance the Political Declaration on AMR.

Advisory Services:

**271**

AMR experts supported in 7 sites to identify high-impact AMR interventions and strengthen strategic NAP implementation through the Smart Choice Process.

**97%**

of AMR experts reported a stronger multisectoral consensus on AMR intervention prioritization post-Smart Choice Process.

**4**

customized policy products delivered to partners to support context-specific AMR policymaking and implementation.

Capacity Strengthening:

**133**

AMR experts from 55 countries equipped with AMR policymaking skills through 5 courses.

**298**

webinars participants in 66 countries engaged on AMR policy through 4 webinars.

**5**

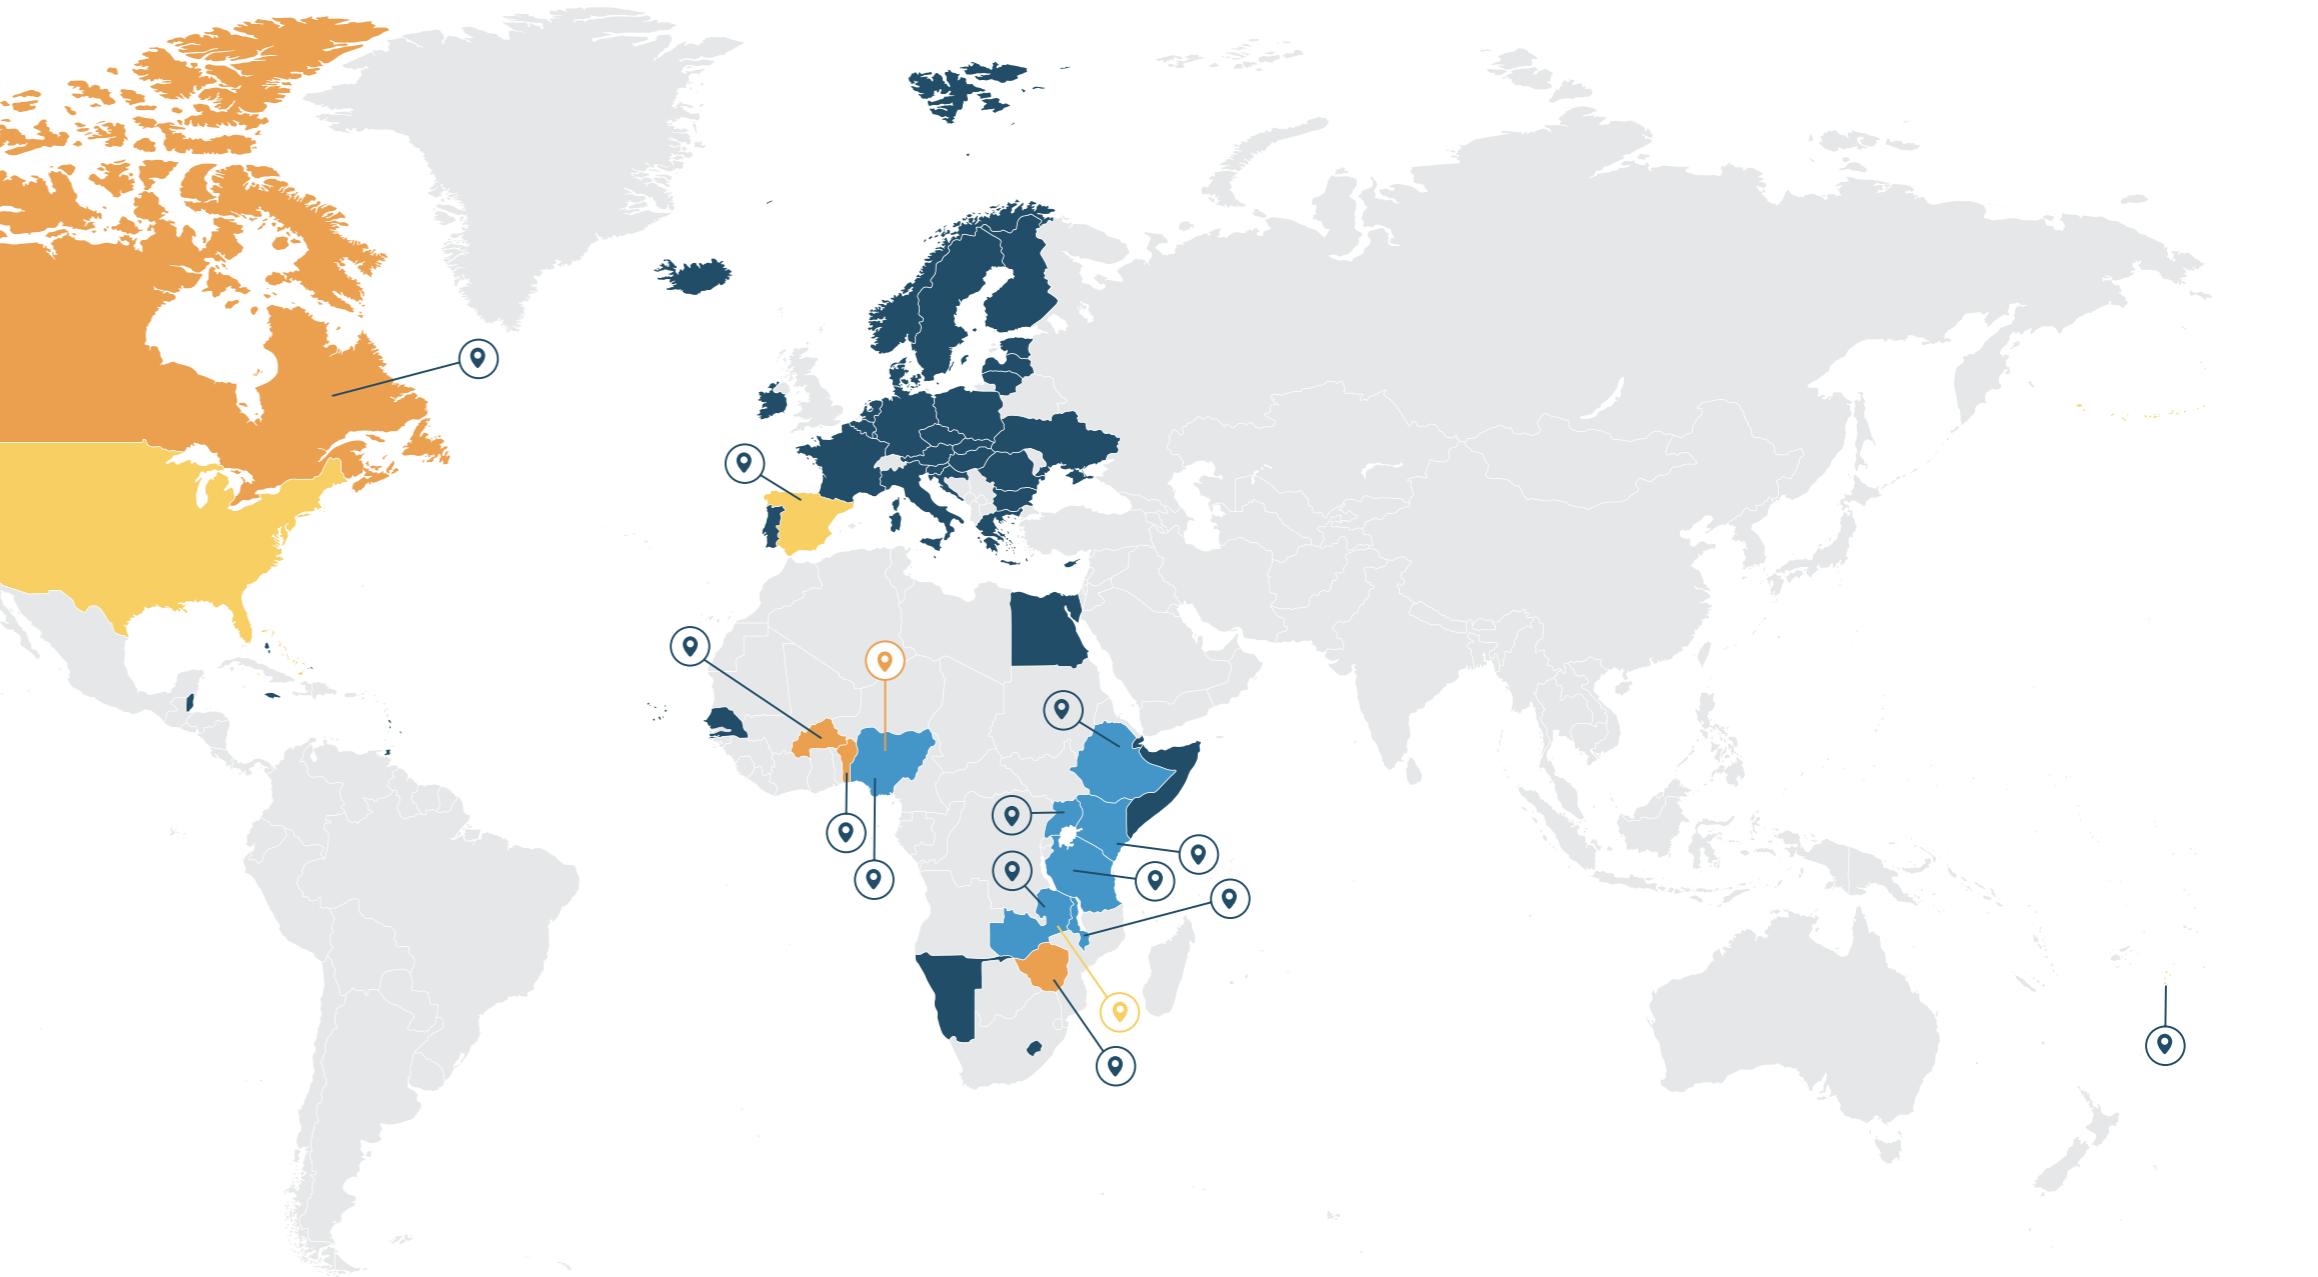

interns provided with opportunities to strengthen AMR policy analysis and research skills.

Reaching a Global Audience

In 2025, the AMR Policy Accelerator continued to support and engage with AMR stakeholders through new policy research, the delivery of advisory services, including the Smart Choice Process, and the offering of capacity strengthening activities, such as the AMR Policymaking Course.

- Smart Choice Process partners**
Uganda, Zanzibar, Malawi, Kenya, Ethiopia, Zambia, Nigeria
- AMR Policymaking Course hosts**
Tonga, United States of America, Zambia, Canada, Spain
- Completed and ongoing advisory services projects**
Canada, Zimbabwe, Nigeria, Benin, Burkina Faso

Advancing AMR Global Governance

Informing the Independent Panel on Evidence for Action against AMR (IPEA)

The IPEA is a key deliverable of the UNGA's 2024 Political Declaration on AMR. According to Draft Zero of IPEA's founding document, it aims to "assess and facilitate the generation and use of multisectoral, policy-relevant scientific evidence to support Member States at all levels in their efforts to tackle AMR applying a One Health approach."

In 2025, the Accelerator's policy research made significant contributions to informing the design and function of the IPEA.

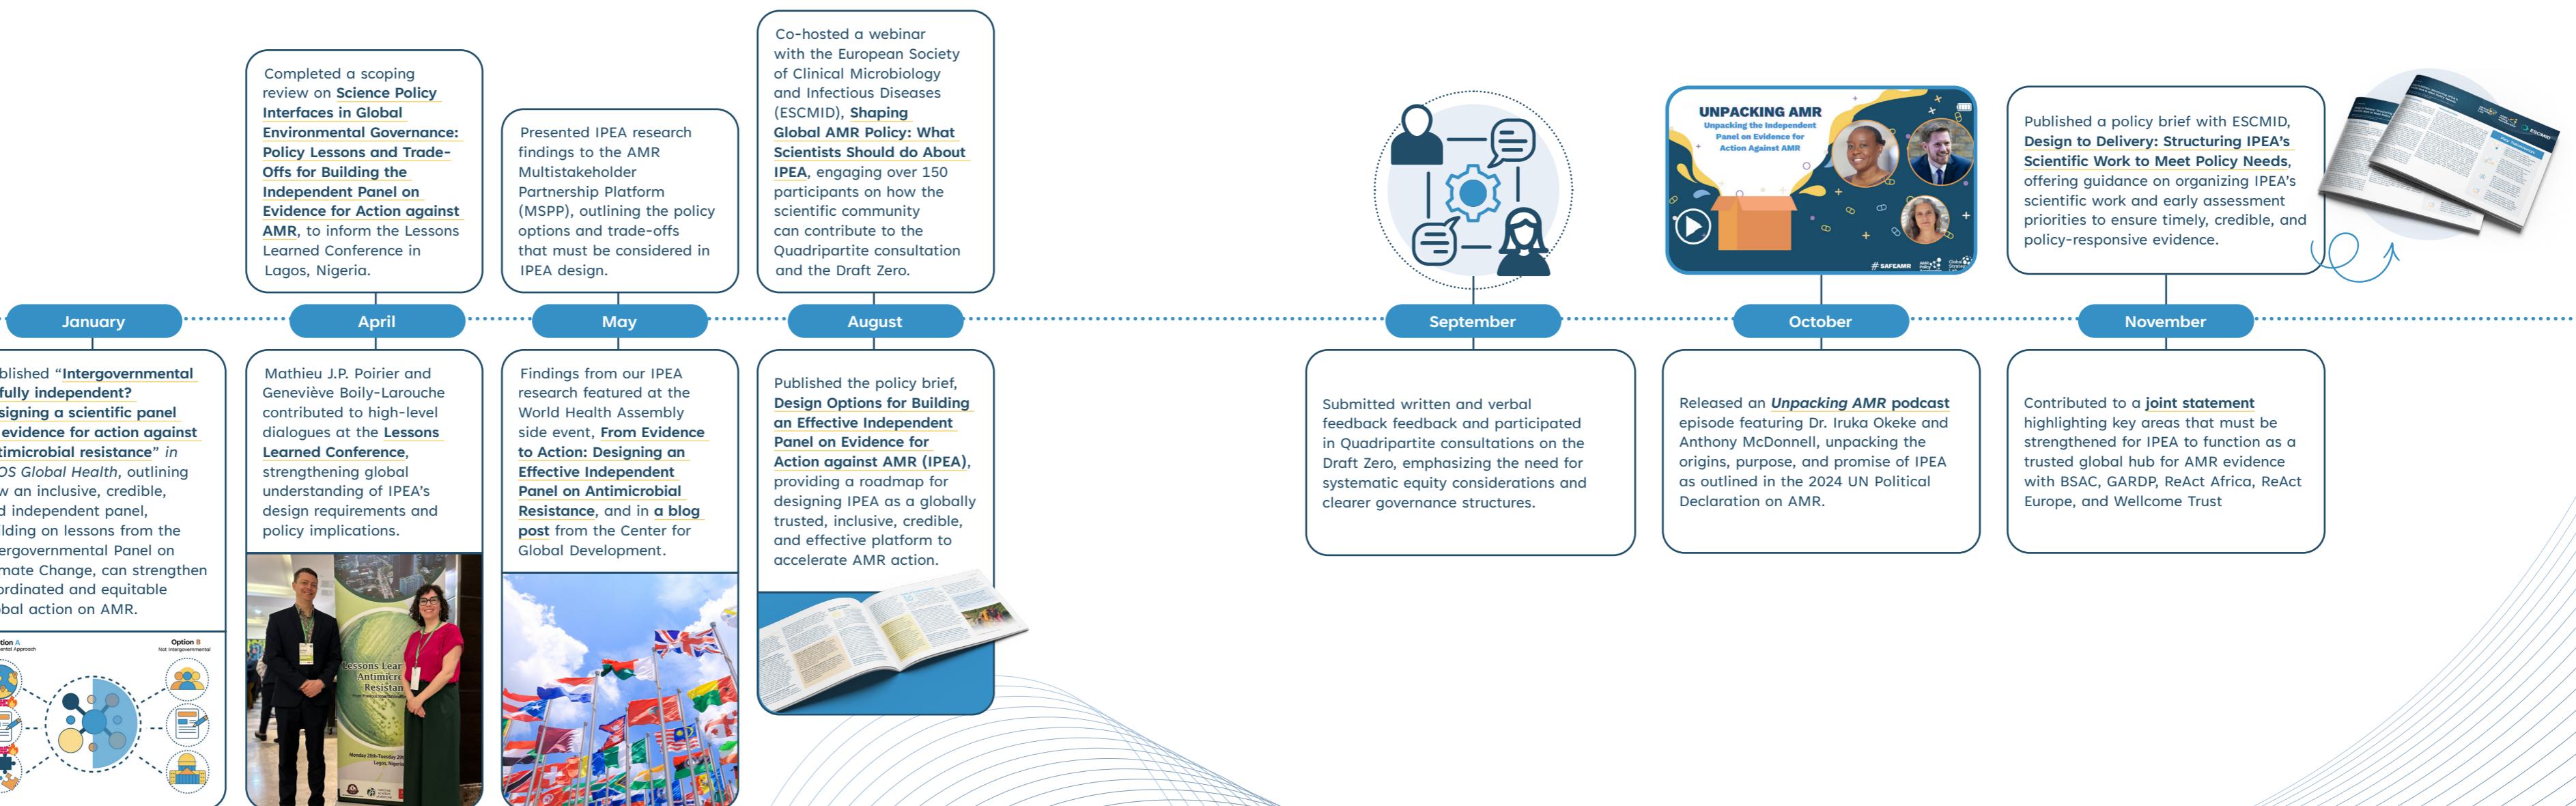

By conducting a review of the effectiveness of science-policy interfaces, our research team identified key design principles to engender IPEA's credibility, inclusiveness, and policy relevance, and outlined how the scientific community can be engaged to help prioritize IPEA's work program. This work emphasized representation from low- and middle-income countries and the integration of social science perspectives into evidence generation. Findings shared through publications, policy briefs, and international consultations informed the Quadripartite's Draft Zero and Draft 1 of IPEA's founding documents, demonstrating the Accelerator's leadership in translating research into policy design and governance insights.

Actioning Evidence-Informed National Policymaking

The Smart Choice Process (SCP): Catalyzing Country-Owned Priorities to Accelerate National Action Plan Implementation

The 2022 WHO implementation handbook for NAPs on AMR identifies prioritization of AMR interventions as a critical step in strengthening implementation. However, practical country guidance for undertaking prioritization remains limited. Responding to this gap, the AMR Policy Accelerator created the SCP for countries to transparently and systematically prioritize AMR interventions.

The SCP applies a collaborative, phased approach spanning 2 to 3 months. Each phase is supported by the Accelerator but led by an in-country core team comprised of representatives from animal, human, and environmental health sectors to foster a shared commitment and unified response to AMR. Central to the SCP is a three-day workshop during which AMR stakeholders and experts participate in an AMR intervention prioritization scoring exercise, followed by multisectoral discussions. The workshop builds consensus on priority interventions identified through the scoring results to ensure that priorities align with the country's social values, policy goals, and financial realities. The process concludes with a final report and brief to catalyze policy advocacy and NAP implementation.

The SCP achieved remarkable growth and impact this past year. Since the first two workshops held in Rwanda and Zimbabwe in late 2024, the SCP supported AMR intervention prioritization across the African continent in 2025. Through the completion of the Antimicrobial Resistance and One Health East and Southern Africa (AMROH) grant, delivered in collaboration with the International Livestock Research Institute and supported by the Fleming Fund, country-led workshops were conducted in Uganda, Malawi, Zambia and Kenya – a major milestone for the SCP. Additional workshops in Zanzibar, Nigeria and Ethiopia were co-organized with the local teams and delivered with the support of the Accelerator.

Across all SCP sites, AMR stakeholders emphasized how the SCP enhanced multisectoral consensus building on AMR priority interventions and provided an opportunity to discuss the realities shaping implementation. The independent evaluation of the Accelerator underscores several early wins achieved through the SCP (Box 1).

Box 1. SCP Impacts Identified by the Independent Evaluation

- The SCP supports comprehensive AMR operational planning and revision, as well as the ongoing implementation and adaptation of NAPs.
- Integrating gender and equity into the SCP prompted deeper stakeholder reflection, leading some countries to update finalized NAPs to be more equity-focused.
- Policymakers reported that the SCP policy briefs were essential for clearly communicating evidence to decision-makers and supporting funding cases for priority AMR interventions.

[Table of Contents](#)[Message from Our Leadership](#)[Vision & Mission](#)[Our Model for Impact](#)[2025 Impact in Numbers](#)[Reaching a Global Audience](#)[Advancing AMR Global Governance](#)[Actioning Evidence-Informed National Policymaking](#)[Strengthening AMR Policymaking Capacity](#)[Art x AMR: Reimagining Resistance Through Storytelling](#)[Looking Forward](#)

The SCP is a perfect tool for helping countries prioritize actions where resources are limited and challenges are many. I am incredibly pleased with this collaboration and the valuable support provided to our regional efforts.

Dr. Arshnee Moodley

AMR Team Leader at International Livestock Research Institute and jointly appointed as Associate Professor at University of Copenhagen

[Table of Contents](#)[Message from Our Leadership](#)[Vision & Mission](#)[Our Model for Impact](#)[2025 Impact in Numbers](#)[Reaching a Global Audience](#)[Advancing AMR Global Governance](#)[Actioning Evidence-Informed National Policymaking](#)[Strengthening AMR Policymaking Capacity](#)[Art x AMR: Reimagining Resistance Through Storytelling](#)[Looking Forward](#)

Integrating Gender into Country Responses to AMR

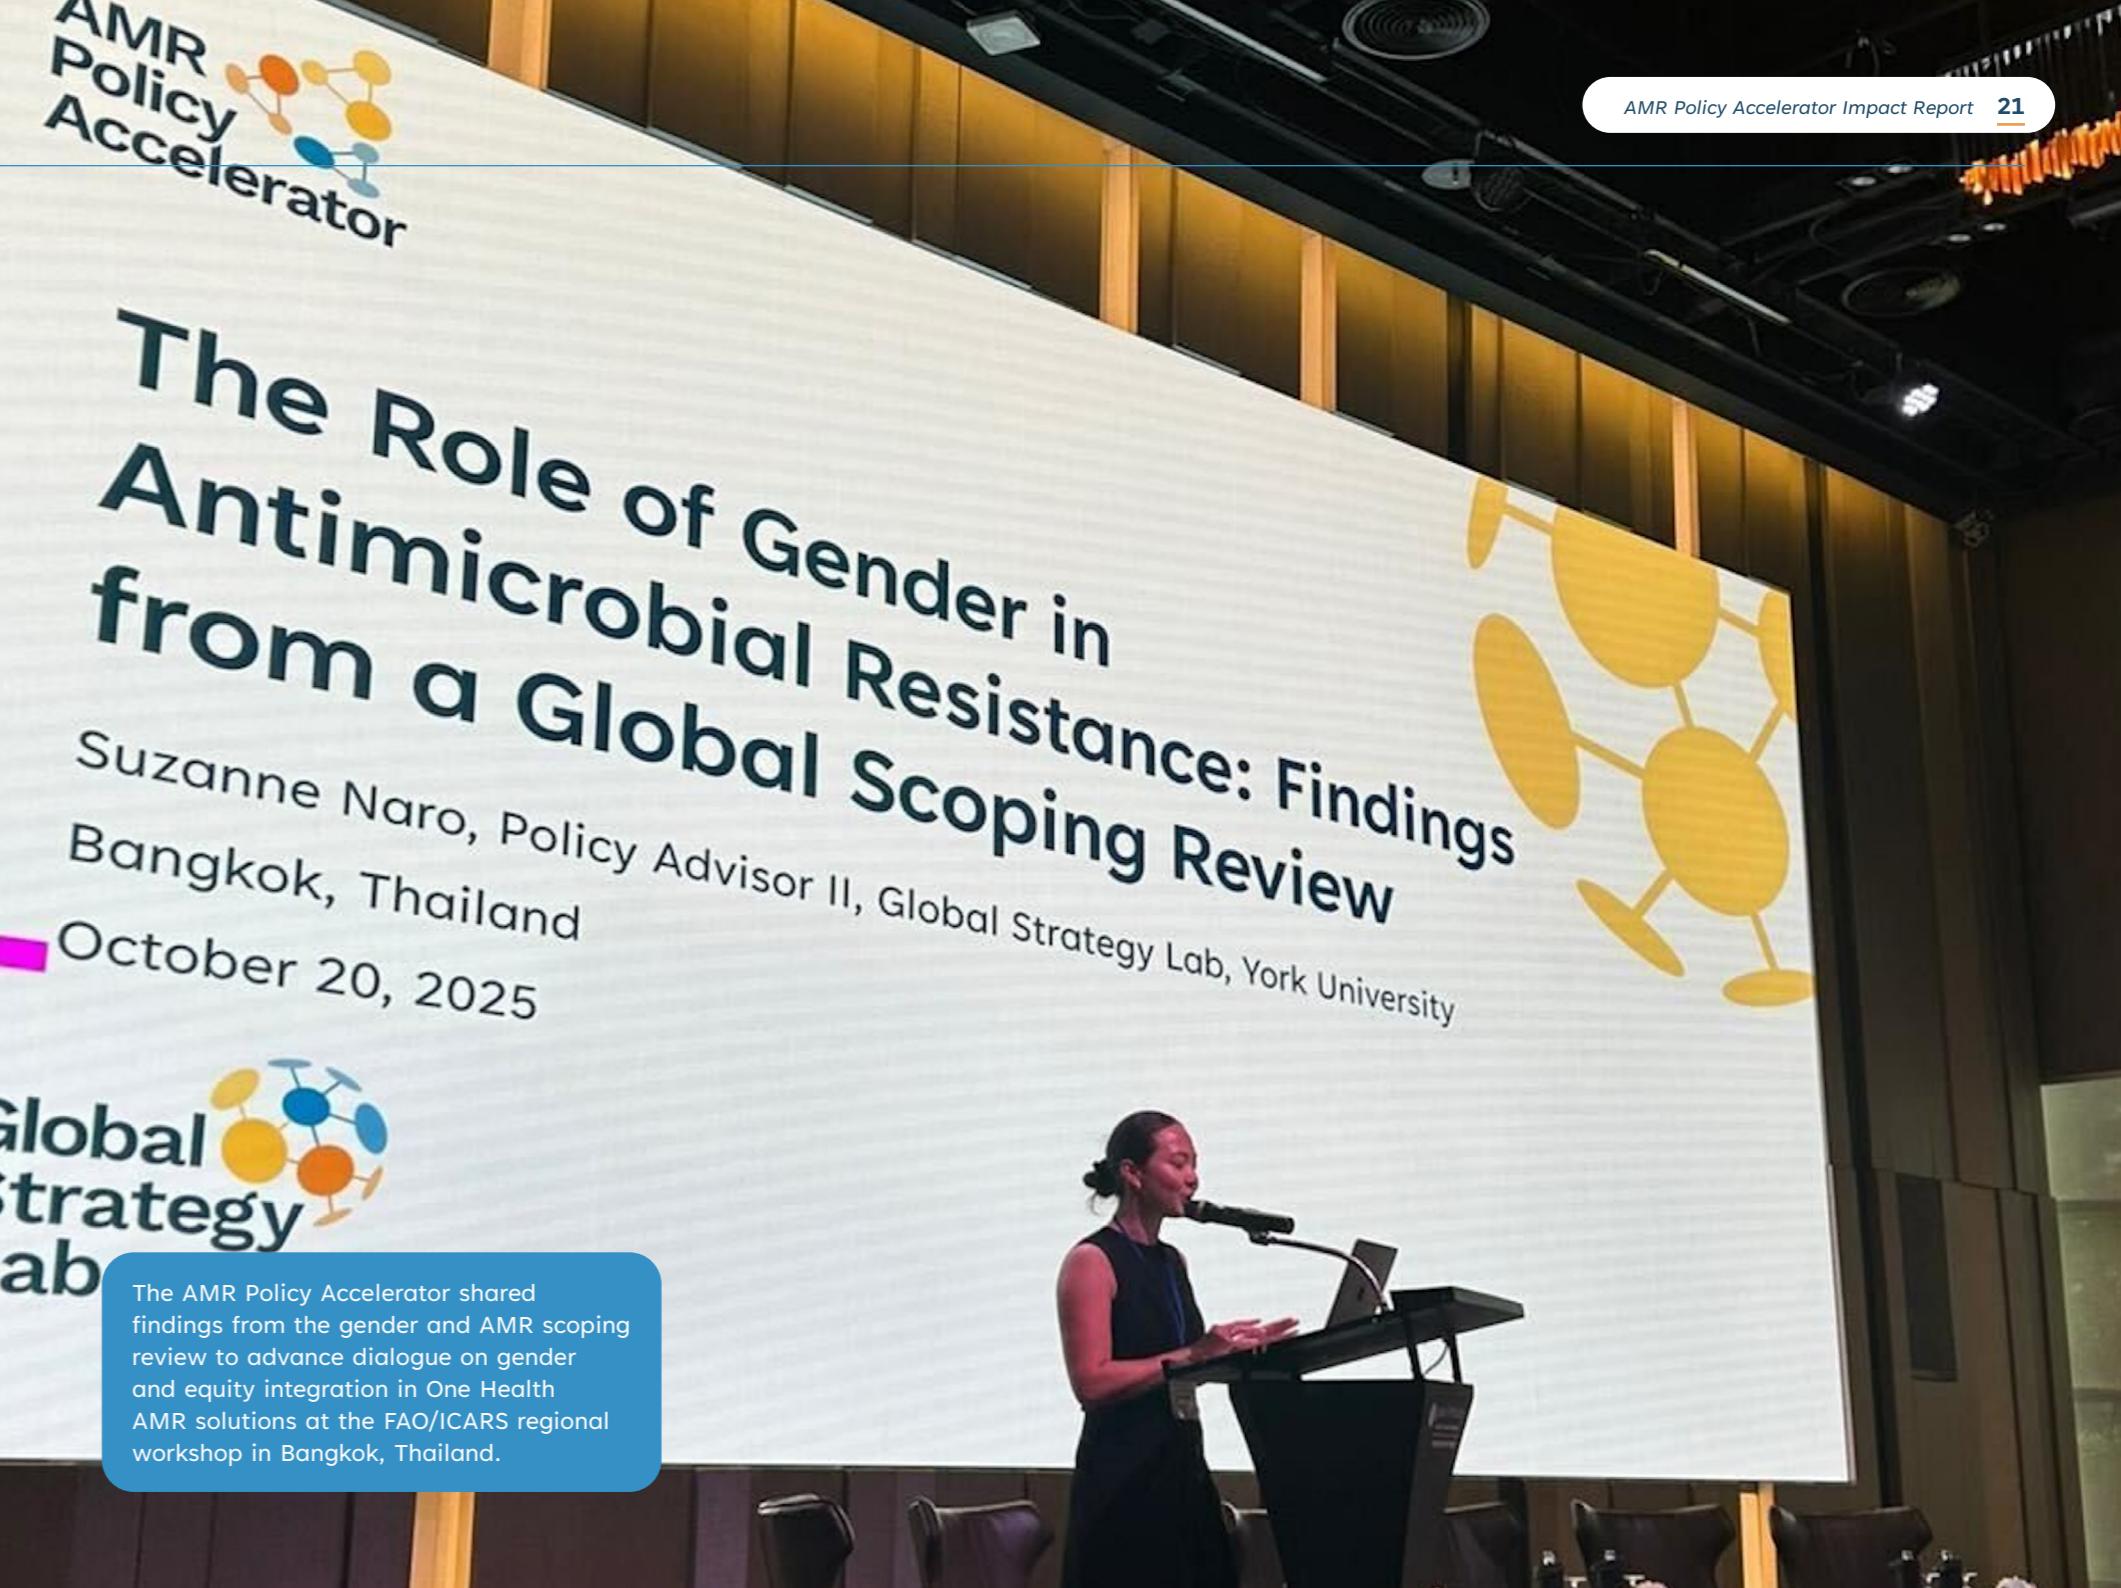

AMR Policy Accelerator researchers have deepened global understanding of how gender shapes AMR through a [recent scoping review](#). Published in August 2025, the review provides a detailed synthesis of how women, men, girls, boys, and gender-diverse populations experience drug-resistant infections across the full care pathway – from prevention to treatment – revealing critical gaps and opportunities.

To translate nuanced evidence into context-sensitive recommendations, the Accelerator followed up in September with a [video series](#) and [policy brief](#). This work builds directly on WHO guidance on Addressing Gender Inequalities in National Action Plans and advances the Political Declaration on AMR,

helping countries fulfill commitments to equitable and inclusive AMR policymaking.

These insights were shared at a workshop hosted by the Food and Agriculture Organization (FAO) and the International Centre for Antimicrobial Resistance Solutions (ICARS) in October in Bangkok, Thailand, engaging over 100 participants and sparking cross-sector learning across human and agri-food systems.

The findings from this research will continue to inform the AMR Policy Accelerator's advisory and capacity strengthening portfolios, ensuring that gender considerations are systematically integrated into the design of future policymaking tools and courses.

Strengthening AMR Policymaking Capacity

AMR Policymaking Course: Navigating Policy Processes for Impact

Effective action on AMR requires policymakers and technical experts who understand the evidence and have the tools and skills to navigate complex policy systems. Now in its second year, the AMR Policymaking Course equips participants to translate evidence into policy, navigate political dynamics, and apply systems thinking to address the root causes of AMR. Each session balances theory with peer exchange, ensuring that learning is both practical and context-specific. The approach used is intentionally reciprocal: facilitators and participants co-create learning through case studies, group discussions, and local examples.

In 2025, the AMR Policy Accelerator delivered five courses — two virtual with the Pan American Health Organization (PAHO) and the Government of Tonga, and three in-person with ReAct Africa, the Canadian Antimicrobial Resistance Network (CAN-AMR), and the

EU-JAMRAI 2 Policy Group (Work Package 5) kick-off meeting. A module of the course was also delivered during a youth-focused training in Francophone Africa through the *Programme de Leadership des Jeunes*, organized by *Actions des Jeunes contre la Résistance aux Antimicrobiens* (AJRAM).

Together, our courses reached 133 participants, including policymakers, laboratory professionals, researchers, and youth advocates across One Health sectors, fostering collaboration among participants who rarely share the same training space.

An independent evaluation of the AMR Policy Accelerator and participant feedback report that participants leave the course with greater confidence in their policymaking skills, increased awareness of gender and equity issues, and a strong desire to apply new tools in their own institutions. To amplify the course's reach, it is delivered with accessibility measures, including funding, linguistic support, and hybrid options, to ensure participation across diverse contexts.

With rising demand from partners across regions, the AMR Policymaking Course has become one of the Accelerator's most visible contributions to capacity strengthening, advancing the vision set out in the 2024 UN Political Declaration on AMR to expand education, collaboration, and cross-sectoral action against antimicrobial resistance.

Box 2. AMR Policymaking Course Impacts Identified by the Independent Evaluation

- The AMR Policymaking course deepens understanding of critical policymaking considerations, resulting in strengthened policymaking and analysis skills.
- The course strengthened participants' ability to:
 - Align policy proposals with political and economic realities and national planning cycles.
 - Increase awareness of gender and equity issues.
 - Bolster cross-sector and intragovernmental relationships to support coordinated AMR efforts.
 - Develop products to communicate evidence to a broader, less technical audience.

[Table of Contents](#)[Message from Our Leadership](#)[Vision & Mission](#)[Our Model for Impact](#)[2025 Impact in Numbers](#)[Reaching a Global Audience](#)[Advancing AMR Global Governance](#)[Actioning Evidence-Informed National Policymaking](#)[Strengthening AMR Policymaking Capacity](#)[Art x AMR: Reimagining Resistance Through Storytelling](#)[Looking Forward](#)**Niniola Williams**Guest Lecturer, AMR Policymaking Course Zambia
Managing Director, DRASA Health Trust

The AMR Policymaking Course created a rare and practical space for policymakers to learn, reflect, and wrestle with the real-world complexities of AMR. AMR was not discussed as an abstract global threat, but as a lived health challenge affecting homes, markets, farms, clinics, and communities across Africa. I was especially encouraged by how intentionally the course integrated community and youth engagement. Policymakers left with data, practical frameworks, and insights from various African country experiences as well as a deeper understanding of what truly drives an effective and sustained AMR response.

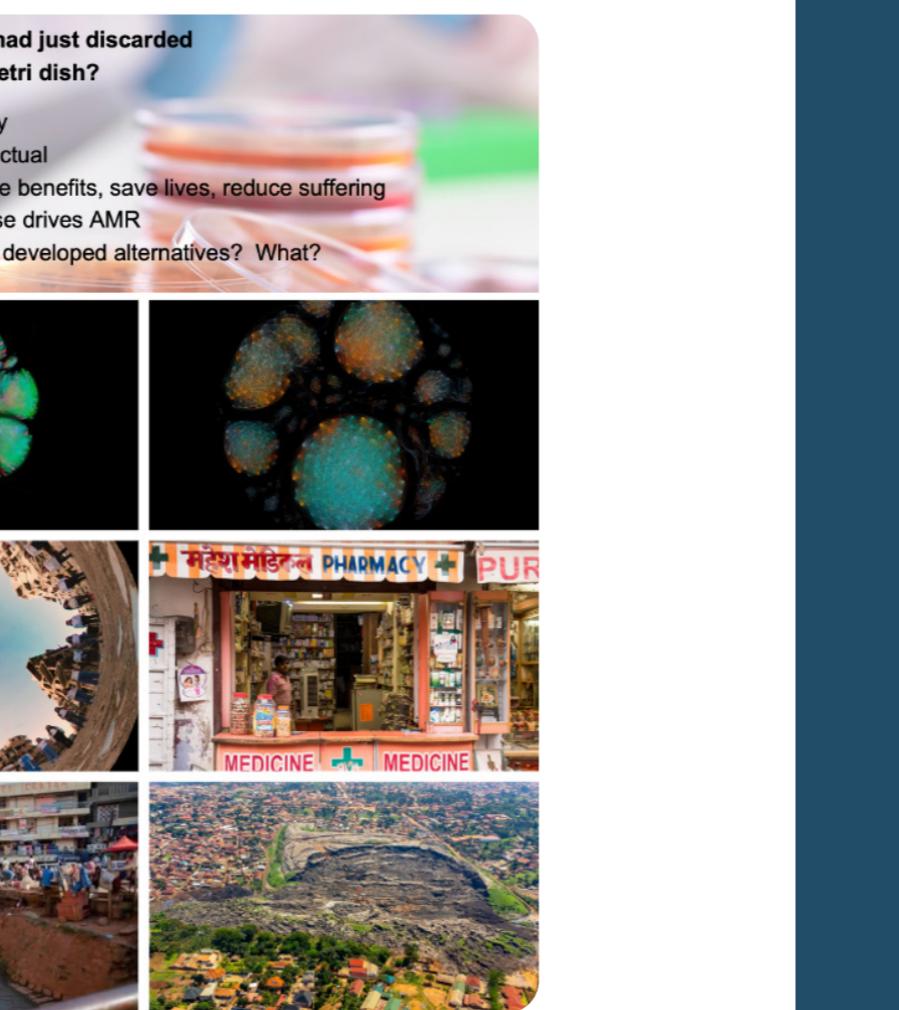

In June, a special two-day edition of our flagship AMR Policymaking Course took place at the ReAct Africa Conference 2025, bringing together 30 participants from across the continent and making the course more accessible than before.

[Table of Contents](#)[Message from Our Leadership](#)[Vision & Mission](#)[Our Model for Impact](#)[2025 Impact in Numbers](#)[Reaching a Global Audience](#)[Advancing AMR Global Governance](#)[Actioning Evidence-Informed National Policymaking](#)[Strengthening AMR Policymaking Capacity](#)[Art x AMR: Reimagining Resistance Through Storytelling](#)[Looking Forward](#)

Art x AMR: Reimagining Resistance Through Storytelling

The Art x AMR Initiative unites artists, writers, and illustrators to show how creative storytelling can reshape public and policymaker understanding of AMR. The Initiative supports projects that translate complex science into artistic experiences and inspires awareness and action on AMR. In 2025, the Accelerator provided seed funding to three pioneering projects now in active development across multiple regions.

Genesis 1928 imagines a world where penicillin was never discovered. Through community-led storytelling from Brazil to India and Uganda to the U.K. it explores local perspectives on health, authority, water, and nature, creating an immersive experience that reframes our co-existence with microbes.

What if.... Fleming had just discarded that contaminated petri dish?

- Parallel history
- The counter-factual
- Antibiotics have benefits, save lives, reduce suffering
- but antibiotic use drives AMR
- would we have developed alternatives? What?

Surgeon X-tra is a project that takes the Surgeon X graphic novels, animations, documentaries and podcasts to develop a platform to release the content on-line for free. The team worked with experts with lived experience from the U.K. South Africa and India to create new comic pages, bringing the patient perspective into the story.

The Microbial Realm: The Resistance Rising brings AMR science into play. This fantasy-meets-reality game turns players into "Microbiowizards" and "Antibiotic Alchemists" who must work together to stop the spread of superbugs. The prototype is being adapted for classrooms, exhibitions, and a future tabletop release.

In November 2025, the Initiative hosted ***Resistance Reimagined: Storytelling Meets Science*** during World AMR Awareness Week, showcasing early prototypes and creative collaborations.

Looking Forward

This year has shown what is possible when evidence, collaboration, and creativity come together to address AMR. As we look to the coming year, we do so with a renewed commitment to supporting our partners through a rapidly changing AMR landscape.

Our contributions this year, from informing IPEA's governance and scientific priorities to expanding the reach of our Smart Choice Process and the AMR Policymaking Course, highlight the essential role of evidence-informed decision-making in shaping effective AMR action.

In the coming year, we will launch a new strategic plan that will guide our work through this next

phase. This plan will sharpen our contributions to the implementation of the updated GAP-AMR, the functioning of the IPEA, and the realization of the Political Declaration. It will also strengthen our support for policymakers as they translate global commitments into national action, laying the groundwork for measurable progress by the 2026 High-Level Ministerial meeting on AMR in Abuja.

The road ahead is challenging, but the momentum has never been stronger. With partners and collaborators across sectors and regions, we are hopeful, energized, and ready to support a more equitable and effective global response to AMR.
